PROJECT 02 · OSINT

OSINT Investigation & Intelligence Gathering Report

Public data, private conclusions – the art of Open Source Intelligence.

Target: <https://www.chicken-road2.app/>

Name	Harmain Shah
Intern ID	CA0200
Project	PROJECT 02 – OSINT Investigation & Intelligence Gathering
Target URL	https://www.chicken-road2.app/
Target Domain	chicken-road2.app

1. EXECUTIVE SUMMARY

This OSINT Intelligence Report presents the findings of a comprehensive open-source investigation conducted on the target website <https://www.chicken-road2.app/>. The investigation employed publicly available tools including direct DNS resolution, TLS certificate inspection, HTTP header analysis, GitHub organisation enumeration, ScamAdviser trust database, and Trustpilot review research — all without accessing any non-public or restricted data.

The target is an **affiliate and SEO-focused website** promoting the **Chicken Road 2** casino crash game developed by **InOut Games** (Curaçao eGaming License No. 1668/JAZ). The site is protected by **Cloudflare CDN**, uses a wildcard **Domain Validated SSL** certificate from Google Trust Services, and serves content across **eight language-specific paths** targeting multiple countries. The domain registrant identity is fully privacy-shielded.

Category	Finding	Risk Level
Domain Registrar	Privacy service active – registrant identity fully concealed	MEDIUM
Hosting / CDN	Cloudflare Inc. (ASN 13335) – real origin IP masked	LOW
IP Addresses	172.67.137.239 and 104.21.38.193 (Cloudflare anycast)	LOW
SSL Certificate	DV wildcard SSL from Google Trust Services – TLS 1.3	LOW
Security Headers	Not verifiable – Cloudflare WAF returns 403 to all scanners	MEDIUM
robots.txt / sitemap	403 Forbidden – Cloudflare WAF blocking both endpoints	INFO
Technologies	HTML5, Cloudflare CDN, Google GTM, Facebook Pixel	LOW
Language Paths	8 paths: /en/ /it/ /es/ /fr/ /de/ /pl/ /pt/ /sk/	INFO
GitHub Presence	9+ public repos by "chickengamegambling" – full structure exposed	MEDIUM
Attribution Lead	GitHub user @reshan3812 linked to the organisation	MEDIUM
Business Nature	Online gambling / casino affiliate – regulated activity	HIGH
Third-Party Tracking	GTM (GTM-W9DD2NF) + Facebook Pixel – GDPR risk	MEDIUM
Trust Score	ScamAdviser: "Very Likely Safe" – gambling category flagged	LOW

2. TARGET OVERVIEW

Field	Details
Target URL	https://www.chicken-road2.app/
Domain Name	chicken-road2.app
TLD	.app – Google Registry (HSTS preloaded, HTTPS mandatory by specification)
Website Title	Chicken Road 2 ■ Casino Game + Free Demo & Bonus
Site Description	Affiliate/SEO site promoting Chicken Road 2 casino crash game by InOut Games
Site Category	Online Gambling / Casino Affiliate / SEO Affiliate Website
Game Developer	InOut Games – Curaçao eGaming License No. 1668/JAZ
Primary Purpose	Drive referral traffic to partner casinos and earn affiliate commissions
Bonus Promoted	"CHICKEN" bonus code – 100% deposit match up to €4,500
Game RTP	95.5% (as stated in GitHub README documentation)
Languages Served	French (default), English, Italian, Spanish, Polish, German, Portuguese, Slovak
Countries Targeted	France, UK, Italy, Spain, Poland, Germany, Portugal, Slovakia and others
HTTP Response	200 OK for real browser traffic 403 Forbidden for automated scanners
HTTP Protocol	HTTP/2 (confirmed via direct curl header scan)

3. INFORMATION GATHERED

3.1 DNS Records & IP Resolution

DNS enumeration was conducted using Python's built-in `socket.getaddrinfo()` function querying the system DNS resolver directly. The domain resolves to two Cloudflare anycast IPv4 addresses and two IPv6 addresses, confirming full Cloudflare CDN deployment with dual-stack (IPv4 + IPv6) support. Nameserver records were confirmed through ScamAdviser infrastructure data.

Record Type	Value	Organisation	Notes
A (IPv4)	172.67.137.239	Cloudflare Inc.	Primary anycast endpoint
A (IPv4)	104.21.38.193	Cloudflare Inc.	Secondary anycast endpoint
AAAA (IPv6)	2606:4700:3030::ac43:89ef	Cloudflare Inc.	IPv6 primary
AAAA (IPv6)	2606:4700:3034::6815:26c1	Cloudflare Inc.	IPv6 secondary
NS	autumn.ns.cloudflare.com	Cloudflare Inc.	Nameserver 1 – DNS management
NS	denver.ns.cloudflare.com	Cloudflare Inc.	Nameserver 2 – DNS management
SSL CN	*.chicken-road2.app	Google Trust Svcs	Wildcard – all subdomains covered

Intelligence Note: All four IP addresses belong to Cloudflare's anycast network (ASN 13335 – CLOUDFLARENET). The real origin server hosting the site content is entirely concealed behind the CDN. Passive OSINT cannot determine the actual hosting provider or server location. Active techniques such as certificate transparency log analysis (crt.sh) or historical DNS enumeration would be required for origin discovery.

3.2 HTTP Response & Security Header Analysis

A direct HTTP header scan was performed using `curl`. The server returned **HTTP/2 403 Forbidden** with a Cloudflare-specific response header **x-deny-reason: host_not_allowed**. This is a Cloudflare WAF (Web Application Firewall) rule that blocks requests from automated scanners and bots while allowing real browser traffic through normally.

Header / Field	Value	Assessment
HTTP Version	HTTP/2	Modern protocol – efficient and secure
Status Code	403 Forbidden	Cloudflare WAF block – not a server error
x-deny-reason	host_not_allowed	Cloudflare firewall rule triggered
content-type	text/plain	WAF block page – plain text response
date	Wed, 22 Jul 2026, 05:37:07 GMT	Confirmed investigation timestamp
Server Header	Not disclosed	Cloudflare deliberately suppresses this
Security Headers	Not verifiable	403 block prevents reading CSP, X-Frame, etc.
HSTS	Enforced by .app TLD spec	.app TLD mandates HSTS preloading globally

Security Note: Because the Cloudflare WAF blocks all automated scanner requests, critical security headers such as Content-Security-Policy, X-Frame-Options, X-Content-Type-Options, and Referrer-Policy cannot be verified through passive OSINT. A full security header audit would require access via a real browser session or a proxy tool such as Burp Suite.

3.3 WHOIS / RDAP — Domain Registration Intelligence

WHOIS and RDAP lookup was conducted via **ScamAdviser** public infrastructure database. The **.app** TLD is managed by Google Registry. The domain registrant has enabled a full privacy protection service — no registrant name, email address, organisation, country, or registration dates are publicly available.

WHOIS Field	Value Returned	Intelligence Significance
Domain	chicken-road2.app	Confirmed target domain
TLD Registry	Google Registry (.app TLD)	.app mandates HTTPS – HSTS preloaded
Registrar	Not disclosed – privacy protected	Registrar identity concealed
Registrant Name	REDACTED FOR PRIVACY	No public attribution possible
Registrant Email	REDACTED FOR PRIVACY	No contact data available
Registrant Country	Not disclosed	Jurisdiction unknown
Creation Date	Not publicly available	Privacy service conceals all dates
Expiry Date	Not publicly available	Privacy service conceals all dates
Nameserver 1	autumn.ns.cloudflare.com	Cloudflare DNS – confirmed
Nameserver 2	denver.ns.cloudflare.com	Cloudflare DNS – confirmed
WHOIS Privacy	ENABLED – all PII redacted	Full anonymisation active
DNSSEC	Not confirmed	Could not verify via passive scan

Attribution Finding: While all WHOIS data is redacted, GitHub OSINT (Section 3.7) identified the account **@reshan3812** linked to the "chickengamegambling" GitHub organisation that owns all site repositories. This is the only public attribution lead for the domain operator. Cross-referencing **@reshan3812** across LinkedIn, Twitter/X, and Facebook may yield further identity information.

3.4 SSL / TLS Certificate Analysis

SSL certificate data was retrieved via a **direct Python TLS handshake** using `ssl.create_default_context()` connecting to port 443. This method extracts the full X.509 certificate without relying on any third-party scanner.

SSL Field	Value	Notes
Common Name (CN)	*.chicken-road2.app	Wildcard – covers every subdomain
Subject Alt Name	DNS: www.chicken-road2.app	Confirmed by TLS handshake
Certificate Issuer	Google Trust Services	Legitimate, globally trusted CA
Certificate Type	Domain Validated (DV SSL)	Confirms domain ownership ONLY – not org identity
Valid From	22 July 2026, 05:36:07 UTC	Current certificate start date
Valid Until	21 August 2026, 05:37:07 UTC	30-day lifespan – auto-renewed
TLS Protocol	TLS 1.3	Latest standard – strong encryption
Certificate Ver.	X.509 v3	Standard industry format
Scope	All *.chicken-road2.app	Single cert covers entire domain

Security Note: A Domain Validated (DV) certificate only confirms that the applicant controlled the domain when the certificate was issued. It provides **no verification of the organisation's legal identity, company registration, or physical address**. Organisation Validated (OV) or Extended Validation (EV) certificates would provide stronger identity assurance. The 30-day auto-renewal is standard practice for certificates managed via Cloudflare or Google Certificate Manager.

3.5 Hosting Provider & IP Geolocation

Both resolved IP addresses were cross-referenced against ASN databases via ScamAdviser infrastructure data. Both confirm **Cloudflare Inc.** as the CDN and reverse proxy operator. The true origin server — the physical machine hosting the web application — is not determinable through passive OSINT.

Field	IP: 172.67.137.239	IP: 104.21.38.193
Organisation	Cloudflare, Inc.	Cloudflare, Inc.
ASN Number	AS13335	AS13335
ASN Name	CLOUDFLARENET	CLOUDFLARENET
Country	United States	United States
HQ City	San Francisco, CA	San Francisco, CA
Node Type	Anycast CDN Edge	Anycast CDN Edge (failover)
Origin IP	Concealed behind CDN	Concealed behind CDN

3.6 Technologies & Tracking Detection

Technology fingerprinting was performed using ScamAdviser page metadata analysis and GitHub repository source code inspection.

Technology	Category	Evidence Source	Risk Note
HTML5	Frontend Framework	GitHub source repos	Standard – no risk

Technology	Category	Evidence Source	Risk Note
Cloudflare CDN	CDN / DDoS Protection	DNS resolution + NS records	Legitimate use
Google Trust Services	SSL Certificate Authority	Direct TLS handshake	Legitimate use
TLS 1.3	Encryption Protocol	Direct TLS handshake	Strong — latest
Google Tag Manager	Analytics / Tracking	ScamAdviser metadata (GTM-W9DD2NF)	GDPR risk
Facebook Pixel	Marketing Tracking	ScamAdviser (app_id: 380732709336812)	GDPR risk
Provably Fair (blockchain)	Game Integrity Tech	GitHub READMEs	Gambling specific
Static HTML / CSS	CMS / Build Type	GitHub repo source structure	Standard

Tracking & Privacy Risk: Google Tag Manager (GTM-W9DD2NF) and a Facebook Pixel (app_id: 380732709336812) were identified in page metadata via ScamAdviser. These tracking scripts transmit user behavioural data to Google and Meta servers on every page load — even before any registration or login. On a gambling-category website, this creates GDPR Article 7 compliance obligations for EU-based visitors. Absence of a proper cookie consent mechanism before these scripts fire would constitute a regulatory violation.

3.7 robots.txt & sitemap.xml

Both standard crawler-discovery files were requested via direct HTTP connection using Python's `urllib.request` module. Both endpoints returned **403 Forbidden**, indicating active Cloudflare WAF rules preventing automated access.

File	URL Requested	HTTP Status	Implication
robots.txt	https://www.chicken-road2.app/robots.txt	403 Forbidden	Content undetermined – Cloudflare WAF blocking crawlers
sitemap.xml	https://www.chicken-road2.app/sitemap.xml	403 Forbidden	Site map not accessible – directory structure not disclosed publicly

3.8 GitHub OSINT — Open Repository Intelligence

A GitHub search for the target domain name revealed the organisation account "**chickengamegambling**". This organisation hosts **nine public repositories**, each containing the complete HTML, CSS, and JavaScript source code for one language-specific version of the affiliate website. The organisation profile is linked to the GitHub personal account **@reshan3812** and publicly lists social media handles including Facebook, LinkedIn, and Twitter links.

URL Path	Language	GitHub Repository	Key Intelligence Exposed
/ (root)	French	chickengamegambling/chicken-road2-fr	Default landing, bonus code: CHICKEN
/en/	English	chickengamegambling/chicken-road-2	URL schema, RTP 95.5%, partner casino list
/it/	Italian	chickengamegambling/chicken-road-2-it	Italian affiliate page source code
/es/	Spanish	chickengamegambling/chicken-road-2-es	Spanish affiliate page source code
/de/	German	chickengamegambling/chickenroad-de	German affiliate page source code
/pl/	Polish	chickengamegambling/chicken-road2-pl	Polish affiliate page source code
/pt/	Portuguese	chickengamegambling/chicken-road-2-pt	Portuguese affiliate page source code
/sk/	Slovak	chickengamegambling/chicken-road-2-sk	Slovak affiliate page source code

Critical OSINT Finding: These public repositories expose: (1) the complete URL path architecture for all eight language deployments, (2) the affiliate bonus code "**CHICKEN**" (100% match up to €4,500), (3) all partner casino relationships and referral link structures, (4) the site's full SEO keyword strategy, and (5) the InOut Games API integration details. Most significantly, the GitHub handle **@reshan3812** is the only public deanonymisation vector for the otherwise fully privacy-shielded domain registrant.

3.9 Social Media Presence & Trust Score Analysis

Social media accounts and third-party trust ratings were identified through GitHub profile metadata and ScamAdviser analysis.

Platform	Profile / Finding	Source	Intelligence Value
ScamAdviser	"Very Likely Safe" — no malware/phishing detected	scamadviser.com	Low fraud risk but gambling category flagged
GitHub	Org: chickengamegambling — 9 repos — linked to @reshan3812	github.com	Primary attribution lead — exposes site architecture
Facebook	Page: "Chicken Road 2" — facebook.com/people/Chicken-Road-2/	GitHub profile	Active social presence — official page
LinkedIn	Company: "Chicken Road 2" — linkedin.com/company/chicken-road-2	GitHub profile	Professional presence — company listed
Trustpilot	Reviews present — includes non-payment complaints from users	uk.trustpilot.com	Reputational risk — user dissatisfaction noted

4. LIST OF TOOLS & WEBSITES USED

#	Tool / Website	Category	Purpose	URL
01	Python socket module	DNS Tool	DNS resolution – A, AAAA records	Built-in (system DNS)
02	Python ssl module	SSL Inspector	Direct TLS handshake – cert extraction	Built-in (ssl library)
03	curl (HTTP scanner)	HTTP Tool	HTTP response headers + status codes	command-line tool
04	Python urllib.request	HTTP Tool	robots.txt and sitemap.xml testing	Built-in (urllib)
05	ScamAdviser	OSINT Platform	Trust score, hosting, WHOIS, tech stack	scamadviser.com
06	GitHub	Code Repository	Org enumeration, repo inspection, README	github.com
07	Trustpilot	Review Platform	User reviews and reputation assessment	trustpilot.com

5. REFERENCES — SOURCE URLS

Every finding in this report is attributed to a specific, verifiable public source. An intelligence report without source attribution is opinion — not evidence.

#	Data / Finding	Tool Used	Source URL
0 1	A and AAAA DNS records — IPs 172.67.137.239 and 104.21.38.193	Python socket	socket.getaddrinfo("chicken-road2.app", 443)
0 2	SSL certificate — CN, issuer, TLS version, validity dates	Python ssl	ssl.create_default_context() → www.chicken-road2.app:443
0 3	HTTP response code 403, x-deny-reason header, HTTP/2	curl	https://www.chicken-road2.app/
0 4	robots.txt — 403 Forbidden status	Python urllib	https://www.chicken-road2.app/robots.txt
0 5	sitemap.xml — 403 Forbidden status	Python urllib	https://www.chicken-road2.app/sitemap.xml
0 6	Hosting ISP, NS records, SSL type, IP, Tranco rank, trust score	ScamAdviser	scamadviser.com/check-website/chicken-road2.app
0 7	WHOIS privacy status — all registrant fields redacted	ScamAdviser	scamadviser.com/check-website/chicken-road2.app
0 8	GTM tag ID (GTM-W9DD2NF) and Facebook Pixel app_id	ScamAdviser metadata	scamadviser.com/check-website/chicken-road2.app
0 9	GitHub org "chickengamegambling", 9+ repos, @reshan3812 identity	GitHub	github.com/chickengamegambling
1 0	Bonus code CHICKEN, partner casinos, URL path schema, RTP 95.5%	GitHub README	github.com/chickengamegambling/chicken-road-2
1 1	Game developer InOut Games, Curaçao License 1668/JAZ	GitHub README	github.com/chickengamegambling/chicken-road-2
1 2	Facebook page, LinkedIn company, Twitter/X handle	GitHub org profile	github.com/chickengamegambling
1 3	User reviews, non-payment complaints	Trustpilot	uk.trustpilot.com/review/chickenroad-2.app

6. SECURITY OBSERVATIONS

The following seven security observations are drawn directly from the evidence collected during this investigation. Each includes the specific finding, its intelligence significance, and the source that produced it.

OBS-01: WHOIS Registrant Identity Fully Concealed

MEDIUM

The domain operator behind chicken-road2.app has activated a full WHOIS privacy service. Every registrant field — name, email address, organisation, country, creation date, and expiry date — is redacted from the public record. While WHOIS privacy is a legal and common practice, it means there is no public accountability for the entity operating this site. The only attribution lead identified is the GitHub account [@reshan3812](#), linked to the chickengamegambling organisation. **Evidence Source:** ScamAdviser — scamadviser.com/check-website/chicken-road2.app

OBS-02: DV SSL Certificate — No Organisation Identity Verification

LOW

The SSL certificate is Domain Validated (DV) — the lowest tier of SSL verification. It confirms only that the certificate applicant controlled the domain at the time of issuance. It does not verify the legal name, company registration, or physical address of the organisation running the site. The 30-day validity with auto-renewal is standard for cloud-managed TLS and does not indicate a security concern. **Evidence Source:** Python ssl module — direct TLS handshake to www.chicken-road2.app:443

OBS-03: Origin Server IP Hidden Behind Cloudflare CDN

LOW

All DNS queries for chicken-road2.app return Cloudflare anycast IP addresses. The real web server hosting the application content is not determinable through passive OSINT. This is a legitimate and widely adopted security configuration that also protects the origin server from direct DDoS attacks. To discover the origin IP, active techniques such as TLS certificate transparency log analysis (crt.sh) or Shodan certificate matching would be required. **Evidence Source:** Python socket.getaddrinfo() + ScamAdviser ASN data

OBS-04: Security Headers Not Verifiable — Cloudflare WAF Active

MEDIUM

The Cloudflare WAF blocks all automated scanner and bot traffic with a 403 Forbidden response (x-deny-reason: host_not_allowed). This prevents passive verification of critical security headers including Content-Security-Policy (CSP), X-Frame-Options, X-Content-Type-Options, and Referrer-Policy. The .app TLD does enforce HSTS preloading, providing some baseline protocol security. A full security header audit would require a real browser session. **Evidence Source:** curl HTTP scan — <https://www.chicken-road2.app/>

OBS-05: Public GitHub Repositories Expose Full Site Architecture

MEDIUM

Nine public GitHub repositories under the "chickengamegambling" organisation contain the complete source code for every language version of the affiliate site. This publicly discloses: all URL path structures, the affiliate bonus code ("CHICKEN" — 100% up to €4,500), partner casino referral links, full SEO keyword strategy, and InOut Games API integration details. Additionally, the GitHub handle [@reshan3812](#) provides the only known deanonymisation lead for the privacy-shielded domain registrant. An attacker could audit the git commit history for accidentally committed credentials or API keys. **Evidence Source:** github.com/chickengamegambling

OBS-06: Gambling Affiliate — Regulatory & Legal Risk

HIGH

The site operates as an affiliate promoting casino gambling, which is a heavily regulated or outright prohibited activity in many jurisdictions. The promoted game is operated under a Curaçao eGaming License (1668/JAZ), which provides limited consumer protections compared to stricter regulators such as the UK Gambling Commission or Malta Gaming Authority. Trustpilot reviews for the associated casino include user complaints about non-payment of winnings. The promoted bonus codes (up to €4,500) may be subject to gambling advertising regulations in multiple EU member states. **Evidence Sources:** GitHub READMEs + uk.trustpilot.com/review/chickenroad-2.app

OBS-07: Third-Party Tracking — GTM & Facebook Pixel (GDPR Risk)

MEDIUM

Page metadata analysis identified Google Tag Manager (ID: GTM-W9DD2NF) and a Facebook tracking Pixel (app_id: 380732709336812) deployed on the site. These scripts are loaded on every page visit and transmit behavioural data — including browsing patterns, time-on-page, and referral sources — to Google and Meta (Facebook) servers, even before any user registration or login. For a gambling-category website accessible to EU residents, this creates GDPR Article 7 (consent) compliance obligations. If no properly implemented cookie consent mechanism is displayed before these trackers activate, this constitutes a potential regulatory violation. **Evidence Source:** ScamAdviser page metadata — scamadviser.com/check-website/chicken-road2.app

7. RECOMMENDATIONS

The following recommendations are addressed to the investigating organisation or any security team conducting due diligence on this target. Each recommendation is mapped to a specific observation from Section 6 and ranked by investigation priority.

#	Recommendation	Priority	Maps To
R-01	Perform an active browser-based security header audit using securityheaders.com or an HTTP interception proxy (e.g. Burp Suite) to verify Content-Security-Policy, X-Frame-Options, Referrer-Policy, and Permissions-Policy.	HIGH	OBS-04
R-02	Search certificate transparency logs on crt.sh for all historical SSL certificates issued for chicken-road2.app and *.chicken-road2.app – pre-Cloudflare certificates may reveal the real origin server hostname or IP address.	MEDIUM	OBS-03
R-03	Perform a full git history audit of all chickengamegambling repositories using tools like git-secrets or truffleHog to identify any accidentally committed API keys, affiliate program credentials, or casino partner tokens.	HIGH	OBS-05
R-04	Verify that a GDPR-compliant cookie consent banner is displayed to EU-based visitors <i>before</i> Google Tag Manager and the Facebook Pixel are allowed to load and collect data. Absence of this mechanism constitutes a potential GDPR Article 7 violation subject to regulatory enforcement.	HIGH	OBS-07
R-05	Cross-reference the GitHub handle @reshan3812 across LinkedIn, Twitter/X, Facebook, and other platforms to build a more complete identity profile of the domain registrant for further attribution.	MEDIUM	OBS-01
R-06	Users considering engaging with casinos promoted by this site should independently verify the casino's licence on the Malta Gaming Authority (mga.org.mt) or the Curaçao eGaming registry before depositing any funds.	HIGH	OBS-06
R-07	Conduct a Wayback Machine lookup at archive.org/web/*/chicken-road2.app for historical page snapshots — early captures may predate WHOIS privacy activation and could reveal registrant information or original site content.	LOW	OBS-01
R-08	Use Shodan or Censys to search for TLS certificates matching the string "chicken-road2.app" — this active reconnaissance technique may identify the real origin server IP address even behind Cloudflare CDN (note: this is beyond the scope of passive OSINT).	LOW	OBS-03

END OF OSINT INTELLIGENCE REPORT

Prepared by: Harmain Shah | Intern ID: CA0200 | Cryptonic Area Internship Program
